

Developing a bladder assessment and management toolkit for Parkinsonism

We are looking for help from people of all backgrounds who care for people with Parkinson's disease (and similar conditions), to help us develop a toolkit for managing bladder symptoms.

We hope that this will result in a quick reference document that can help clinicians in assessing and treating bladder symptoms, which are really common in this group.

Prior to finalising this, we are looking to ask for help with a questionnaire, which we would like to invite Parkinson's doctors (geriatricians and neurologists) and Parkinson's specialist nurses to take part in. This looks at different people's experiences with bladder symptoms and helps us understand the variations in different services across the country, so that we can make the tool kit as useful as possible.

Completing the questionnaire will give you access to the first iteration of the toolkit, which will be made available later in 2025. The hope is that this will help in your day to day practice in addressing these symptoms.

The questionnaire can be reached at:

<https://www.surveymonkey.com/r/YJRPJDC>

We thank you very much for your help with this project, which is kindly funded by Parkinson's UK.
